

Harry H. Hilton (h-hilton@illinois.edu 1-217-333-2653) Cell iPhone 1-217-8440-1116

Professor Emeritus of Aerospace Engineering in the Grainger College of Engineering (GCOE) and Senior Academic Lead for Computational Structural/Solid Mechanics at the National Center for Supercomputing Applications (NCSA)

316 Talbot Lab., MC-236, University of Illinois at Urbana-Champaign (UIUC)
104 South Wright Street, Urbana, IL 61801-2935

BS 1947 and MS 49 Aeronautical Eng. (compressible aerodynamics) New York U., Ph. D. Theoretical & Applied Mechanics (solid mechanics major with applied mathematics minor) 51 UIUC. On UIUC AE faculty since 1949. Aeronautical & Astronautical Eng. department head 74 - 85, assistant dean of engineering, summers 1989 & 90. Distinguished Visiting Professor of Mechanical Engineering, Nanyang Technological University, Singapore (1999-2000). Alfred M. Freudenthal Visiting Professor, Leopold-Franzens-Universität, Austria, 1995. Charles E. Schmidt Distinguished Visiting Professor, Florida Atlantic U., 1997-2001, 2007.

Fellow of the American Institute of Aeronautics and Astronautics (AIAA) and fellow of the American Society for Composites (ASC). Past consultant for McDonnell Corp., Hughes Aircraft, Aerojet-General, and Boeing. Expert witness at aerospace accident trials. Served in US Army, 1944-46.

Current member of the following committees: AIAA Structures Technical, AIAA Non-Deterministic Applications Technical, the ASTM D-30 on Composite Materials, UIUC AAUP Policy, UIUC Senate, two archival journal editorial boards and two scientific committees organizing international conferences. He also is the past chair of the AIAA Illinois Section, and is the Great Lakes regional director for Sigma Gamma Tau, the national aerospace engineering honor society, past president of the Board of Directors of the Levis Faculty Center, and 1959-61, 1969-71, 2013-19 president UIUC Chapter American Association University Professors (AAUP). He is a recipient of American Civil Liberties Union's (ACLU) Victor J. Stone

Award for Lifetime Commitment to Civil Liberties, AAUP Academic Freedom Award and the AIAA service award.

He has also been active in community affairs as the chair of the Champaign-Urbana (C-U) Symphony Guild, member of the C-U ACLU steering committee, past 2nd vice-president Champaign County Democratic Central Committee, past chair of the Champaign City Human Relations Commission, and past chair of the C-U Council for Integration.

After his retirement in 1990, he continues to be actively engaged in research with a part time NCSA appointment, teaching one of three graduate AE courses (528, 529, 550) each semester and special research problems AE 497/597, and in public and professional service. Currently he advises one PhD thesis student. He has published over 500 papers in archival journals or conference proceedings and 11 book chapters. His present active analytical & computational research areas are deterministic and stochastic linear and nonlinear viscoelasticity, composites, aero-thermo-viscoelasticity, aerodynamic noise, computational solid mechanics, structural probabilistic failure criteria and analysis, damping & nonlinear dynamics, linear & nonlinear anisotropic viscoelastic finite element analysis, optimum designer materials and systems of systems, piezoelectric, magnetic, and functionally graded viscoelastic materials, nonlinear creep and delamination column & plate buckling, analytical determination of damping properties, material characterization, stochastic minimum structural weight analysis, probabilistic delamination of composites during service and manufacturing processes, 3D/4D viscoelastic printing, structural control and survivability, engineering education, and structural integrity of dentures.

He is an internationally and nationally recognized authority in solid mechanics, viscoelasticity and aero-viscoelasticity. Notable research achievements include first papers in the archival literature on: viscoelastic analysis with temperature dependent material properties (1951), column creep buckling (1952), generalized viscoelastic creep buckling (1961), elastic and viscoelastic beams neutral axis and shear center motions (1962), stress invariant failures (1993), viscoelastic Poisson ratios (1998), the importance of initial loading paths in viscoelasticity (1999), optimum viscoelastic designer materials (2003) and on large optimized designer systems of systems (2013), Theodorsen function for variable flight velocities (2011), generalized multi-dimensional material probabilistic constitutive relations and failure conditions based on stress and/or strain invariants (2018), generalized probability density function with unlimited number of open parameters and four proper BCs (2018), viscoelastic follower loads (2020).
