Exploring How Expectations Affect Health-Related Behaviors: Integrating Economic and Social Science Perspectives. The purpose of this study is to investigate (1) whether and how expectations of the consequences of risky health behaviors change when youth are presented with factual information about behavioral consequences, and (2) the extent to which these behaviors change as a function of this new, factual information. The intervention involves providing participants with factual information about risky behaviors and related consequences (e.g. income, educational attainment, disease transmission).

Changes in expectations and behaviors will be measured by comparing 3-month baseline to 3-month post-intervention weekly text messaging data.

Transition to Fatherhood. The study investigates the transition to father with four related projects, each housed in different institutions. This study empirically investigates males' timing and progression into adult roles - spouse, parent, and worker - in an attempt to test and generate theories about timing, ordering, and determinants of these various transitions and to assess the 'good women and good jobs produce good men' theory of adulthood transition for males. We focus on the transition to first biological fatherhood. This study has three major aims: (1) gaining an increased understanding of the sequencing, reciprocal effects, and linkages among work, union, and fatherhood transitions for subgroups of males of reproductive age; (2) garnering information about the relationship among men's aspirations, opportunities, and fatherhood/ fertility behaviors; and (3) assessing how social policies influence opportunity structures for males. Although numerous policy variables apply to our research questions and aims (e.g., welfare, tax, and employment policies), we are especially interested in investigating (a) how child support enforcement policies influence the transition to fatherhood as well as father involvement in children's lives, and (b) how labor market demand influences the transition into employment and the sequencing of transition into fatherhood relative to employment.

Innovations at the Nexus of Food, Energy and Water Systems (INFEWS). The overarching theme of this study is the integration of an innovative and evidence-based education model with cutting edge interdisciplinary research focused on Innovations at the Nexus of Food, Energy and Water Systems (INFEWS). It includes the development and implementation of a training program that addresses the critical need for a skilled workforce equipped to meet three key challenges: 1) providing adequate amounts of food to a growing population; 2) generating energy that is both sustainable and carbon-neutral; and 3) managing water resources. This project will establish an academy of innovators that incorporates the most effective models for the training of STEM professionals – including developmental network-based mentoring and career preparation comprising technical and professional skill development – and to closely integrate this training with interdisciplinary research focusing on synergizing algae, agriculture, water remediation and power generation technologies to attain sustainability both in water use and in the concurrent production of energy, fuel and food.

Center for Adolescent Health Promotion and Disease Prevention. The mission of the Center for Adolescent Health Promotion and Disease Prevention at The Johns Hopkins University is to work in partnership with local youth-serving organizations to prepare youth in urban communities for healthy adult life styles. Healthy life styles involve low levels of risk taking in terms of substance use and sexual behavior; competencies to care for one's own health in terms of nutrition, physical activity, and the appropriate use of health services; good relationship skills to get along with others, form committed relationships, care for dependent individuals, and engage in civic life; and capacity to participate in productive economic activity. Specifically, the Center's mission addresses health behaviors that are particularly problematic for Baltimore youth: 1) sexual risk taking, 2) substance use, 3) violence, and 4) the low utilization of appropriate health services. The Center's mission and priorities were developed in collaboration with the Center's Community Advisory Board (CAB), and reflect the natural evolution of Center work over the past decade.

Naturalistically Transforming Preschoolers' Cognitive and Emotional Regulation through Mindful Movement. Preschoolers depend on external assists for emotional regulation (ER) and inhibitory control (IC) until brain and endocrine systems mature in later developmental stages. Mindful Movement Practices (MMPs) – breath work, intentional movement sequences, static poses, and focused attention drills – are ideal regulatory strategies during early childhood because they leverage maturing sensory-motor systems that children rely on for learning about and coping with environmental stressors. Classrooms are natural settings where MMPs may have the greatest reach and impact. The proposed four-year study includes multiple methods (behavioral tasks, observations, surveys, focus groups) and a randomized control experiment among preschool classrooms, reaching up to 50 unique students and 6 of their teachers.

Leadership & Team Science Workshop Series Co-Organizer and Presenter

Team Skill-Building Workshops. Funded by the Office of Research and the Center for Clinical and Translational Science and Training (CCTST), this series of three two-hour workshops was designed to train faculty and staff across the University of Cincinnati and Cincinnati Children's Hospital in effective ways of leading and managing teams. This

series was offered twice during the 2016-2017 academic year and three times during the 2017-2018 academic year. Workshops included 25-30 participants each series.

CARES Event

Ruby Mendenhall

Research, Evaluation, and Service Conference Co-Organizer

Moving beyond your academic self: Participatory approach tools that center community and youth voice to promote relevance and equity in prevention research and evaluation.

Pre-Conference workshop submitted to the 2024 Annual Conference of the Society for Prevention Research. May 28, 2024. Washington, DC. This workshop will review key principles in participatory research and evaluation, reflect on the potential and utility of participatory methods in prevention science, and then provide training on two participatory methods our team uses to engage communities and youth in prevention work.

Organizers & Presenters: Jacinda K. Dariotis, Rachel Jackson-Gordon, Dana A. Eldreth, Lisa M. Vaughn

Extending Your Reach: Effective Strategies for Including Traditionally Hard to Reach Populations in Your Services, Evaluation, and Research. Funded by Ohio Mental Health and Addiction Services (OhioMHAS), UCESC organized and hosted a conference on collecting data from, and delivering services to, traditionally labeled as “hard-to-reach” populations at the University of Cincinnati, May 4, 2015. This conference was designed to help attendees clearly identify populations of interest and collect data from groups that might be traditionally characterized as “hard-to-reach.” A toolkit of useful approaches, methodologies and documents was provided that guides users on how to connect evidence-based practice with hard-to-reach populations.

Mindfulness Symposium Co-Organizer

Mindfulness and Learning. Funded by the Science of Learning, a two-day symposium (Mindfulness and Learning Research Symposium) was held at the Johns Hopkins University, September 29-30, 2014. This conference united interdisciplinary mindfulness researchers and leaders within Hopkins and globally to synthesize cutting-edge scientific research and showcase what is known – and currently unknown – on mindfulness and learning.
