

ILLINOIS INNOVATION PRIZE

I ILLINOIS

Technology Entrepreneur Center
COLLEGE OF ENGINEERING

Hiba is the Co-Founder and CEO of PhantomCor, which is disrupting the field of medical imaging. By creating a physical device which anatomically and physiologically simulates a patient's heart, there can be higher accuracy in medical imaging and personalized medicine in diagnostics. This device can help researchers developing cardiac protocols, innovators in the development of other cardiac devices, doctors in diagnostics and pre-surgical analysis, and educators in training the future generation of physicians. Since leading this team of undergraduates in 2015, Hiba has been working hard to make this dream a reality.
