COLLEGE OF ENGINEERING

Rohit Kalyanpur is the Founder and CEO of Optivolt Labs, Inc., a company which is working to bring true wireless charging to the masses. Rohit has developed an extremely efficient patent pending power transfer system which allows for solar to be a viable option for charging consumer electronics. Essentially the system is a miniaturization of large scale solar optimization technologies which are used in solar farms and grid applications. The system allows for efficient charging in indoor and outdoor light and can be integrated in any product that uses a battery. Alongside Particle, which is an extremely efficient Solar iPhone Case that Optivolt Labs has developed, Rohit and his team are also working with executives in various industries to integrate their technology in products such as drones, solar EV vehicles, and other battery integrated products.
