

ILLINOIS INNOVATION PRIZE

 **TECHNOLOGY ENTREPRENEUR CENTER**
ENGINEERING AT ILLINOIS

Mayank Kale is a Junior Computer Science student and CEO and Founder of Invoq Health, a startup that is transforming the way community health NGOs and research organizations manage their healthcare information in India and Africa.

Mayank founded Invoq Health in early 2015 to digitize health data collection in rural parts of the world and to create tools that enable front-line health care workers to effortlessly collect and share data, discover powerful insights, and empower research organizations to quickly deploy robust research studies and health interventions. The solution is now managing 106,000 patient records in central India, with a plan for additional deployments to 1.5 million people over the next 2 years. He hopes to scale Invoq with a focus on building tools that help deliver on-the-field care using software and telemedicine technologies that take advantage of the data collected by health workers. Invoq Health also participated in the iVenture Accelerator during the 2015-16 academic year.

Other than Invoq Health, Mayank is a member of the Hoeft Technology and Management Program, James Scholar and Vice President of National Organization for Business and Engineering.

2016 TOP 3 FINALIST
MAYANK KALE

Junior, Computer Science, College of Engineering
