

# Fall 2021 Phys 496 Grad School Q&A Session

---

## Topics

### “To be, or not to be” (a graduate student)

- Things to consider when deciding whether to go to graduate school
- What's life like as a grad student

### Applying to graduate school

- Issues to consider: e.g., recommendation letters, statement of purpose

### How to choose a graduate school

- Sources of information on schools, faculty, and research

### Getting into graduate school

- Some ways to make yourself competitive

## “To be or not to be” (a grad student)

---

### **Did you enjoy your undergraduate research experience?**

Graduate school is (almost) all about research. You must be willing to invest the time (typically 5-6 years) and long hours to get a PhD.

### **Do the research areas you have been hearing about sound interesting?**

It's important for you to expose yourself to all the different research areas, to see if anything strikes your fancy!

### **Does the open-ended nature of research appeal to you?**

You'll have guides in your research, but no experts who'll know the answer for sure!

### **Are you resilient and not easily distracted or deterred?**

You'll definitely run into road blocks in research, and you'll need to pull yourself through

# Timeline of a typical grad student

---

- First year
  - some courses (2 to 3 per semester); prep for qualifying exam
  - learn about research opportunities
  - Serve as a teaching assistant
- First summer
  - start up with research group
    - hopefully that is the start of a longer term relationship
- Second year
  - generally you take a ‘qualifying’ exam at beginning of year
  - 1 or 2 courses each semester, ramp up on research
  - Become a research assistant in this and (maybe) subsequent years
- Third year
  - 1 specialized course per year (maybe), mostly research
  - thesis proposal (“prelim” exam)
- Years 4-N
  - focus is entirely on research
  - you may take an occasional “seminar” course

## What's Grad School Like?

---

**Question:** “Can we take some time off to [insert activity here] and then go to grad school...or would my chances lessen as a result?”

**Answer:** There is no rush to go to graduate school! If you decide to take a year or two off before going to grad school, this won't hurt your chances with most admissions committees. Doing something productive certainly helps, but is probably not essential. Beware the GRE delay!!

# What's Grad School Like?

---

**Question:** “How is grad school paid for?”

**Answer:** Generally in grad school you will be supported either by a TA or an RA, so you won't have to work another job to support yourself. Tuition is generally waived.

# Preparing for Grad School

---

## Freshman/Sophomores

Get good grades!  
Think about undergraduate research  
Don't put off laboratory courses!

## Juniors

Undergraduate research!  
Get good grades!  
GRE in April?

## Seniors

Check test deadlines and applications deadlines early!  
Take GREs in **September** or **October**  
Research graduate schools, faculty, and research areas  
Line up recommendation letters early...think carefully about writers  
Polish the statement of purpose...have someone proofread it!  
Apply to schools starting in early December...check deadlines!

# Preparing for Grad School

---

**Question:** “Should I be taking grad courses before I apply?”

**Answer:** You should demonstrate a strong foundation in upper level physics and math courses. Grad level classes are not necessary in my opinion...I'd opt for a deeper/broader preparation at the undergraduate level (e.g., more math!) than diving into grad courses. Make sure you're prepared for the GREs!

# Preparing for Grad School

---

**Question:** “How much research experience is needed to be competitive for a top grad program?”

**Answer:** You’re not competitive if you have NO research experience, but it isn’t necessary to have long experience or multiple experience. A quality experience – leading to a happy supervisor and a strong recommendation letter – is probably better than several short research activities in which you’re unable to make much research progress or form much of an impression on your advisor.

# Preparing for Grad School

---

Other issues:

## Grades vs GRE?

At Illinois – and indeed at most places, I think -- grades are weighted more than GRE scores. Math and Physics grades are most important, as are grades in upper level courses

## Don't slack off your senior year!

If you're on the borderline for admission, admissions committees often ask for updates of grades and look at course deficiencies.

## Interested in theory?

Take more math!

## Interested in experimental physics?

Take more labs! Take labs earlier rather than later!

## Not sure about your research interests?

Sample different research areas, if possible.

# Applying to Grad School

---

# Applying to Grad School

---

**Question:** “What should be included in the statement of purpose?”

**Answer:** The statement of purpose is very important, as it is one of the only places to put information about your research abilities in your application.

- Emphasize your research experience and enthusiasm for research...describe what got you “hooked” on scientific research
- Explain your interests: don’t be too vague or broad in your descriptions
- Tailor part of the statement to the institution: explain why the institution you’re applying to is ideal for fulfilling your goals...name specific faculty in whom you’re interested
- Have someone edit your SOP...avoid typos and grammatical mistakes!

# Applying to Grad School

---

**Question:** “Who should I consider for recommendation letters?”

**Answer:** Recommendation letters are of crucial importance, and they should emphasize your research abilities, if possible

- You should have **at least** 1 letter writer who can describe your research abilities
- If you use a letter writer from a course, choose someone who can comment on special qualifications you have, not just what grade you received
- Give your letter writers plenty of notice...do not wait until the last minute to ask them to write letters
- Provide your letter writers with a copy of your CV and, if possible, a draft of your SOP

## Some Graduate school application deadlines\*:

<u>Deadline</u>	<u>Schools</u>
Dec. 1–21, '21	<u>Berkeley</u> , <u>Cal Tech</u> , <u>Chicago</u> , <u>Cornell</u> (Physics), <u>Cornell</u> (App. Physics), <u>Florida</u> , <u>Harvard</u> , <u>Johns Hopkins</u> , <u>Maryland</u> , <u>Michigan</u> , <u>Minnesota</u> , <u>MIT</u> , <u>Ohio State</u> , <u>Princeton</u> , <u>Purdue</u> , <u>San Diego</u> , <u>Santa Barbara</u> , <u>Stanford</u> (Physics), <u>Stanford</u> (App. Phys), <u>Texas</u> , <u>UCLA</u> , <u>Wisconsin</u>
Dec. 26–31, '21	<u>Northwestern</u> , <u>Rutgers</u>
Jan. 1–6, '22	<u>Columbia</u> , <u>Yale</u> (Phys & App. Phys)
Jan. 14-21, '22	<u>Illinois</u> , <u>Rochester</u>

\*Often significantly earlier for fellowship/international applicants

# Applying to Grad School

---

## Other issues:

### Ask about application fee waivers

Some programs will offer a waiver of the significant application fee if you ask!

### Subject GRE test

An increasing number of grad programs don't require the Physics GRE test:

<https://www.gradschoolshopper.com/gradschool/browseby.jsp?q=3&cid=3>

### APS Webinars on Grad Admissions worth checking out:

November 2016: <https://www.youtube.com/watch?v=N9KjNXm-BjU>

November 2017: <https://www.youtube.com/watch?v=s5nDQ-OvRkQ>

# Choosing Grad Schools

---

**Question:** “What schools are considered safety schools?  
How many schools should I apply to?”

**Answer:** Tough question -- the answer to this of course depends on your grades and GRE scores. The top 10 programs aren't sure bets for anyone. You should NOT apply just to 2-3 top programs. You should probably apply to 6-10 programs, with a good distribution between “top” and “mid-level” schools. Try going on-line to see qualifications of different classes.

Check out [Gradschoolshopper.com](http://Gradschoolshopper.com) and look for schools with good programs in your field of interest *and* high acceptance rates.

## Sort by: Acceptance Rate

Total: 134 Results

Note: Click on column header to sort.

	School name	Department	Acceptance rate	Number applied	Number admitted	Number enrolled
1	University of Chicago	Astronomy & Astrophysics	6.59%	273	18	4
2	New Mexico State University	Astronomy	7.95%	151	12	5
3	Wesleyan University	Physics	8.89%	45	4	3
4	Vanderbilt University	Physics & Astronomy	8.94%	179	16	11
5	Clark University	Physics	9.52%	21	2	1

## Choosing Grad Schools *During a Pandemic*

---

Some programs may cut back on grad admissions next year:

- (1) Some programs have had funding issues because of COVID-19
- (2) Some programs had unexpectedly large Fall 2021 class sizes
- (3) Many programs reported record numbers of applications for Fall 2021 admission

**What does this mean?** It might be a good idea to apply to more safety schools than you would in a typical year.

# Choosing Grad Schools

---

Other issues to consider:

Don't be too selective: Apply to all the programs in which you have a strong interest

Aim high! Don't be too quick to convince yourself that there are schools you simply can't get into—but also apply to a “safe” school

Don't put your 'eggs' in one research 'basket': Make sure there is more than one research project you're interested in at a particular school

Don't assume you're sure about what research area you're interested in: Allow yourself the opportunity to shop around

Fellowships! Remember, it's not just about admission. If your application is in top shape, you can also have a shot at a fellowship...these may have an earlier application deadline

# Choosing Grad Schools

---

## Where to get information on departments:

### (1) Departmental websites

<http://www.google.com>: Search: “school” + physics

### (2) Talk to faculty in your departments

### (3) Graduate Programs in Physics, Astronomy, and

Related Fields: <http://www.GradSchoolShopper.com>

### (4) Rankings:

PhD.org: <http://www.phds.org/rankings/physics>

National Doctoral Program Survey:

- Hertz Foundation: ~ October 23, 2021  
<http://www.hertzfoundation.org>
- National Physical Science Consortium: December 15, 2021  
<http://www.npsc.org>
- American Assoc. Univ. Women Fellowships: November 1, 2021  
<http://www.aauw.org/what-we-do/educational-funding-and-awards/>
- Gates: October 13, 2021 (US citizens); December 2, 2021 or January 6, 2022 (non-US, depending on course)  
<http://www.gatesscholar.org>

# Choosing a Graduate School

---

## Other issues to consider:

If you haven't settled on a research area, think big: Larger schools generally have more diversity of opportunities and research areas

Go on as many visits as possible: This is a great way to see the true level of activity in a department, to get a feel for the style of the department and of the different research groups, and to get a feel for the surrounding community

Talk to graduate students in the department and research groups you're interested in: They can provide real insight into the character of the group or department...but consider only first-hand information

Quality of life issues are important!: You're going to be in grad school for 5-6 years, and so to do your best work, it's important that you're comfortable in the environment and with the people you're working with

# Choosing a Grad School

---

**Question:** “How do you find a group/advisor once you’re admitted?”

Issues to consider:

Is your “top choice” faculty member taking students?

Call or e-mail him/her and ask, ask during visit days

What is the “style” of the group in which you’re interested? (find out from current grad students, by calling or asking during visits)

- Does the faculty member maintain close oversight of students, or does he/she let students work for long periods of time by themselves?
- Are the research projects collaborative (multiple students), or does every student have his/her own project?
- Will you be expected to build a new apparatus (or write new code), or will you be jumping in the middle of a well-developed project?
- Is it likely you’ll be constantly funded during your tenure, or will you be expected to TA periodically?

---

**OTHER  
QUESTIONS?**
