

Name: \_\_\_\_\_

DISC: \_\_\_\_\_

- Do your own work.
- Answer the questions below in the space provided.
- Make sure you show all your work and any equations that you use.
- Please place a box around your answers.
- Remember to give the correct units with all numerical answers

1. A barometer can be used to measure atmospheric pressure ( $P_{ATM}$ ). In a barometer an evacuated tube is inserted into a pool of liquid, in this case olive oil. Let's investigate what happens:

$\rho$ Olive Oil	$P_1$	$P_{ATM}$
$800 \text{ kg/m}^3$	$0 \text{ Pa}$	$101325 \text{ Pa}$

Explanation  
(2pts):

- a. Why is the height of the olive oil in the tube related to the atmospheric pressure?

- b. How long must the tube be to measure the atmospheric pressure using olive oil?  
(hint:  $P_{ATM} = P_1 + \rho gh$ )

Pressure (3 pts):

2. Remarkably steel ships do not sink in the ocean. Employ Archimedes' Principle to explain why.

Floating Carriers  
(5 pts):

ARCHIMEDES' PRINCIPLE	$\rho_{sea}$	$\rho_{steel}$
$F_B = \rho_{fluid} V_{displaced} g$	$1.025 \text{ g/ml}$	$7.9 \text{ g/ml}$

3. Hook's Law,  $F_{spring} = -kx$ , describes the force exerted on an object by a spring.

Answer:

- a. An object is attached to a horizontal spring and rests on a frictionless surface. The spring is displaced from the equilibrium position.  
The object *does not experience constant* acceleration (choose one): **true/false?**
- b. Draw a free-body diagram describing the situation in part (a). Remember to include a coordinate system and all force labels.

Free-body  
Diagram (2pts):

- c. Using  $U_{spring} = \frac{1}{2}kx^2$  and *energy conservation* explain why the *speed* of the object depends on its *position* ( $x$ ). Let the initial displacement of the spring be  $x_{initial}$ .

Explanation (2  
pts):

4. Foucault's Pendulum is a simple harmonic oscillator. It was used to demonstrate the rotation of the earth.

Answer:

- a. Does Foucault's Pendulum experience constant acceleration? Explain your answer.

- b. If the pendulum length is 8 m, use  $T = 2\pi\sqrt{\frac{L}{g}}$  to find the period of the pendulum's swing.

Period (2 pts):

- c. Now take your Foucault's Pendulum to another planet. You want to measure the acceleration of gravity. You set up your pendulum and notice that  $T = 2T_{Earth}$ . What is the acceleration of gravity on the new planet,  $g_{new}$ ?

$g_{new}$  (2 pts):
