

Name: _____

DISC: _____

Score: ____ / 20

Instructions:

- Do your own work.
- Answer the questions below in the space provided.
- Make sure you show all your work and any equations that you use.
- Please place a box around your answers.
- Remember to give the correct units with all numerical answers

Q1

Q2

Q3

Q4

10

5

5

1. A solid, horizontal disk is free to rotate about its center. A force of $F = 6\text{ N}$ acts tangentially at the edge of the disk.

MASS	RADIUS	I
5 kg	1 m	$I = \frac{1}{2}MR^2$

Table 1: Properties of the Disk

- a. What is the torque on the disk ($\tau = RF \sin\theta$)?

Torque (3 pts):

- b. The disk starts rotating from rest. Using $\tau = I\alpha$, what is the angular acceleration of the disk?

Angular
Acceleration (2
pts):

- c. Recall: $\omega(t) = \omega_0 + \alpha t$. Calculate the angular speed of the disk at $t = 4\text{ s}$.

Angular speed (2
pts):

- d. What is the kinetic energy of the disk at $t = 4\text{ s}$ ($K = \frac{1}{2}I\omega^2$)?

Kinetic Energy (3
pts):

2. A solid cylinder rolls without slipping down an inclined plane. The cylinder starts from rest at the top of the incline. The following are true about the cylinder-inclined plane system:

ANGLE OF INCLINE	LENGTH OF INCLINE	CYLINDER MASS	CYLINDER RADIUS
25°	5 m	4 kg	0.5 m

- a. Draw a figure which describes the cylinder and inclined plane *before* the cylinder starts to roll. Remember to label all parts of the diagram.

Figure (2 pts):

- b. As the cylinder rolls down the incline which of the following occur (select all correct responses):

Selections (2 pts):

- i. Momentum is conserved.
 - ii. Potential energy is converted into kinetic energy.
 - iii. The cylinder will have both rotational and translational kinetic energy.
- c. What is the potential energy of the cylinder at the top of the incline ($U = mgh$)?

Potential Energy (2 pts):

- d. What is the total kinetic energy ($K = \frac{1}{2}Mv_{cm}^2 + \frac{1}{2}I\omega^2$) at the bottom of the incline (hint: total energy is conserved).

Total Kinetic Energy (2 pts):

- f. Using $\omega = v_{cm}/R$, find the rotational speed of the cylinder at the bottom of the ramp. For a solid cylinder $I = \frac{1}{2}MR^2$.

Rotational Speed (2 pts):
