

Name: _____

DISC: _____

Score: _____ / 20

Instructions:

- Do your own work.
- Answer the questions below in the space provided.
- Make sure you show all your work and any equations that you use.
- Please place a box around your answers.
- Remember to give the correct units with all numerical answers

Q1	Q2	Q3	Q4
5	10	5	5

1. How would you explain the difference between the **electric potential energy** and the **electric potential**? Are these quantities vectors or scalars?

Definitions: 3 pts.
Vector or Scalar: 2 pts

2. Consider the following situation (Q_1, Q_2 are fixed):

a	b	Q_1	Q_2	k	ELECTRIC POTENTIAL	WORK
5 m	3 m	$+4.0\text{ }\mu\text{C}$	$-2.5\text{ }\mu\text{C}$	$9 \times 10^9\text{ N m}^2/\text{C}^2$	$V(r) = \frac{kq}{r}$	$W = Vq$

- a. Using the information in the table, find the electric potential at the point A.

Potential (5 pts):

- b. How much work do you have to do to bring a charge $q = 1.5 \mu\text{C}$ from far away to the point A?

Work (5 pts):

3. Consider the charged particle and uniform electric field shown in the figure. The particle travels from point A to point C to point B. ($W = F\Delta r \cos \theta$)
- a. In which step(s) does the *electric force* do work?

Steps (2 pts):

- b. How does the work done by the *electric force* change if the particle travels from point A to point B *without* traveling to point C? Explain your reasoning.

Change (1 pts):
Explanation (2 pts):
