

Dear Students,

We are pleased to announce a **new resource to support students in Research, Entrepreneurship, Design and Innovation (REDI)**!

To provide more general engagement with faculty, to support students in REDI activities, and to create a community of scholars, we are introducing the [REDI Faculty Mentors](#) available through [Bookings](#). The REDI mentors can provide short-term mentorship in the areas below, but mentorship is not limited to these areas and could extend to longer-term mentorship on specific projects.

To get the most out of your time with a [REDI Faculty Mentor](#) be sure to **be on time, be prepared**, and if you have must, please **only cancel with 24 hours notice**.

This resource will be available starting February 9th. REDI Mentors can help with:

- Determining areas of interest for research
- Giving feedback on idea pitch
- Early project planning and development
- Identifying research opportunities and research mentors
- Proposal development (e.g., Innovation Pathways or other)
- Guiding students on the publication process (but not editing papers)
- Connecting students to REDI campus resources
- And other areas

Information on the REDI Faculty Mentors is [here](#), where you can see their brief bios and areas of mentoring expertise in REDI activities. Faculty have diverse expertise ranging from design to technology transfer, commercialization, research design, proposal development, and more.

REDI Faculty Mentors will be available through Bookings [[here](#)].

Please check out this amazing new resource and [sign up here](#) to meet with [one of these REDI faculty mentors](#).

This is a collaboration between the Biomedical and Translational Sciences Department, the department housing campus faculty, and the Office of Research and Innovation.

Thank you!

OLIVIA C. COIADO, PHD (she/her,ela)

Teaching Associate Professor

Director of Student Research – Office of Research and Innovation
