## MATH 241

## Midterm 3 Review

Keep in mind that this presentation was created by CARE tutors, and while it is thorough, it is not comprehensive.

## QR Code to the Queue

The queue contains the worksheet and the solution to this review session

## Fubini's Theorem

- If $f(x, y)$ is continuous on the rectangle

$$
\begin{aligned}
\mathrm{R} & =\{(\mathrm{x}, \mathrm{y}) \mid \mathrm{a} \leq \mathrm{x} \leq \mathrm{b}, \mathrm{c} \leq \mathrm{y} \leq \mathrm{d}\} \\
\iint \mathrm{f}(\mathrm{x}, \mathrm{y}) \mathrm{dA} & =\int_{\mathrm{a}}^{\mathrm{b}} \int_{\mathrm{c}}^{\mathrm{d}} \mathrm{f}(\mathrm{x}, \mathrm{y}) \mathrm{dydx}=\int_{\mathrm{c}}^{\mathrm{d}} \int_{\mathrm{a}}^{\mathrm{b}} \mathrm{f}(\mathrm{x}, \mathrm{y}) \mathrm{dxdy}
\end{aligned}
$$

## Double Integral Over a General Region

- Integrate dy from $y=x$ to $y=1$
- Then integrate dx

- Integrate $d x$ from $x=0$ to $x=y$
- Then integrate dy

## Center of Mass

- The $\mathrm{x}, \mathrm{y}$ coordinates of the center of mass for an object that has a density function $\rho(x, y)$

$$
\overline{\mathrm{x}}=\frac{1}{\mathrm{~m}} \iint x \cdot \rho(x, y) d A \quad \overline{\mathrm{y}}=\frac{1}{\mathrm{~m}} \iint y \cdot \rho(x, y) d A
$$

, where mass is calculated as $\mathrm{m}=\iint \rho(x, y) d A$

## Triple Integral

- Let $E$ be the solid contained under the plane $2 x+3 y+z=6$ in the first octant. Compute the following:

$$
\iiint_{E} 2 x \mathrm{dV}
$$

## Triple Integral-Cont'd

- Let $E$ be the solid contained under the plane $2 x+3 y+z=6$ in the first octant. Compute the following:

$$
\begin{gathered}
\iiint_{E} 2 x d V=\int_{0}^{3} \int_{0}^{2-2 x / 3} \int_{0}^{6-2 x-3 y} 2 x d z d y d x=\int_{0}^{3} \int_{0}^{2-2 x / 3} 2 x(6-2 x-3 y) d y d x \\
\quad=\int_{0}^{3} 12 x\left(2-\frac{2 x}{3}\right)-4 x^{2}\left(2-\frac{2 x}{3}\right)-3 x\left(2-\frac{2 x}{3}\right)^{2} d x=9
\end{gathered}
$$

## Example Question \#1

- Match the integrals to their corresponding solid regions:
(A) $\int_{0}^{1} \int_{y}^{1} \int_{0}^{2-x^{2}-y^{2}} f(x, y, z) d z d x d y$
(B) $\int_{0}^{1} \int_{0}^{1-x} \int_{0}^{1-x^{2}-y^{2}} g(x, y, z) d z d y d x$

## Example Solution \#1

(A) $\int_{0}^{1} \int_{y}^{1} \int_{0}^{2-x^{2}-y^{2}} f(x, y, z) d z d x d y$
(B) $\int_{0}^{1} \int_{0}^{1-x} \int_{0}^{1-x^{2}-y^{2}} g(x, y, z) d z d y d x$

B

## Polar Coordinates

$$
\begin{gathered}
x=r \cos \theta \\
y=r \sin \theta \\
r^{2}=x^{2}+y^{2} \\
\theta=\arctan \left(\frac{y}{x}\right)
\end{gathered}
$$

$$
\mathrm{dA}=\mathrm{rdrd} \theta
$$

https://magoosh.com/hs/ap-calculus/2017/ap-calculus-bc-revi ew-polar-functions/

## Cylindrical Coordinates

- Cylindrical coordinate is just an extension of polar coordinate to three dimension

$$
\begin{gathered}
\mathrm{x}=\mathrm{rcos} \theta \\
\mathrm{y}=\mathrm{rsin} \theta \\
\mathrm{z}=\mathrm{z} \\
\mathrm{r}^{2}=\mathrm{x}^{2}+\mathrm{y}^{2} \\
\theta=\arctan \left(\frac{\mathrm{y}}{\mathrm{x}}\right) \\
\mathrm{dV}=\operatorname{rdzdrd} \theta
\end{gathered}
$$

Sketch of a point in $R^{3}$

## Spherical Coordinates

$$
\begin{gathered}
\mathrm{x}=\rho \sin \varphi \cos \theta \\
\mathrm{y}=\rho \sin \varphi \sin \theta \\
\mathrm{z}=\rho \cos \varphi \\
\rho^{2}=\mathrm{x}^{2}+\mathrm{y}^{2}+\mathrm{z}^{2} \\
\mathrm{~d} V=\rho^{2} \sin \varphi \mathrm{~d} \rho \mathrm{~d} \theta \mathrm{~d} \varphi
\end{gathered}
$$

## Surface Area

- The area of the surface $A(S)$ with equation $z=f(x, y)$ can be calculated as:

$$
A(S)=\iint_{D} \sqrt{1+\left(\frac{\partial z}{\partial x}\right)^{2}+\left(\frac{\partial z}{\partial y}\right)^{2}} d A
$$

## Change of Variables Using Jacobian Matrix

- If there is a transformation such that $x=g(u, v)$ and $y=h(u, v)$, then:

$$
\iint_{R} f(x, y) d A=\iint_{S} f[g(u, v), h(u, v)] \cdot\left|\frac{\partial(x, y)}{\partial(u, v)}\right| d \bar{A}
$$

, where the Jacobian Matrix is calculated as

$$
\frac{\partial(x, y)}{\partial(u, v)}=\left|\begin{array}{ll}
\frac{\partial x}{\partial u} & \frac{\partial x}{\partial v} \\
\frac{\partial y}{\partial u} & \frac{\partial y}{\partial v}
\end{array}\right|=\frac{\partial x}{\partial u} \frac{\partial y}{\partial v}-\frac{\partial x}{\partial v} \frac{\partial y}{\partial u}
$$

## Example Question \#2

- Set up the integral to calculate the area of $R$ with the transformation $\mathrm{T}(\mathrm{u}, \mathrm{v})=\left(\mathrm{u}^{2}+\mathrm{v}, \mathrm{v}\right)$.

## Example Solution \#2

- Set up the integral to calculate the area of $R$ with the transformation $\mathrm{T}(\mathrm{u}, \mathrm{v})=\left(\mathrm{u}^{2}+\mathrm{v}, \mathrm{v}\right)$.
$\underbrace{v_{\uparrow}}_{(0,1)}$

$$
0 \leq \mathrm{v} \leq 1-\frac{\mathrm{u}}{2} \quad 0 \leq u \leq 2
$$

$$
\text { Jacobian: } \operatorname{det}\left[\begin{array}{cc}
2 u & 1 \\
0 & 1
\end{array}\right]=2 u
$$

$$
\text { Integral: } \int_{0}^{2} \int_{0}^{1-u / 2} 2 u \text { dvdu }
$$
