Using a nickname is fine!

Topic

Location
Please say whether you are waiting to meet **in person** or **online**. If your instructor requires it, also give the room number or online meeting URL.

1.

Overview

Quick bits of info to know

Newton's Laws

- ▶ 1st Law: Velocity of an object is constant if the sum of forces on the object is zero, $\mathbf{F}=\mathbf{0} \Leftrightarrow \mathbf{dv}/\mathbf{dt}=\mathbf{0} \Leftrightarrow \mathbf{a}=\mathbf{0}$ (Inertia)
- ▶ 2nd Law: The net force on an object is equal to its mass times its acceleration, $\mathbf{F}=\mathbf{ma}$
- ▶ 3rd Law: Any forces acting on an object will have an equal and opposite reaction, $\mathbf{F}_{a,b} = -\mathbf{F}_{b,a}$
- ▶ These equations are true for all interactions in Phys 211!
Note that the forces and acceleration are vectors;
direction matters

1-D, 2-D Kinematics

▷ Equations associated with Kinematics:

▶ $\mathbf{v} = \mathbf{v}_o + \mathbf{a}t$

▶ $\mathbf{r} = \mathbf{r}_o + \mathbf{v}_o t + \frac{1}{2} \mathbf{a} t^2$

■ r is the position in x or y (at time t)

▶ $\mathbf{v}^2 = \mathbf{v}_o^2 + 2 \mathbf{a} (\mathbf{x} - \mathbf{x}_o)$

Relative, Circular Motion

- ▶ The Centripetal force is a fictitious force, meaning that it is a result of other forces acting on a system to make it go in circular motion
- ▶ Centripetal acceleration, for circular motion, is always radially inwards and the velocity is tangential to the path

Kinematics

▷ Projectile Motion

- ▶ X direction: v is constant, $\mathbf{a} = \mathbf{0}$
- ▶ Y direction: v at top = 0, $\mathbf{a} = \mathbf{g}$
- ▶ Remember, time is the same in both x/y
- ▶ Break up velocity into components if needed

▷ Circular Motion

- ▶ Acceleration always points inward
- ▶ $\mathbf{v} = \boldsymbol{\omega r}$ (and is tangential to path)
- ▶ Direction of individual forces can be different at different positions of the circle

Forces

- ▷ Conservative
 - ▶ Weight (gravity)
 - ▶ Spring Force: $\mathbf{F}_s = -\mathbf{k} \Delta\mathbf{x}$
 - ▶ Potential Energy difference
- ▷ Equal & Opposite Forces
- ▷ X and Y components still apply, especially for ramp problems
- ▷ Free Body Diagrams:
 - ▶ The net force is NOT drawn on the free body diagram
 - ▶ Only draw external forces acting on the object
- ▷ Nonconservative
 - ▶ Normal: Perpendicular to an object's surface by below surface
 - ▶ Tension: points away from object
 - ▶ Friction: $\mathbf{f} = \mu\mathbf{N}$, opposes motion

Friction

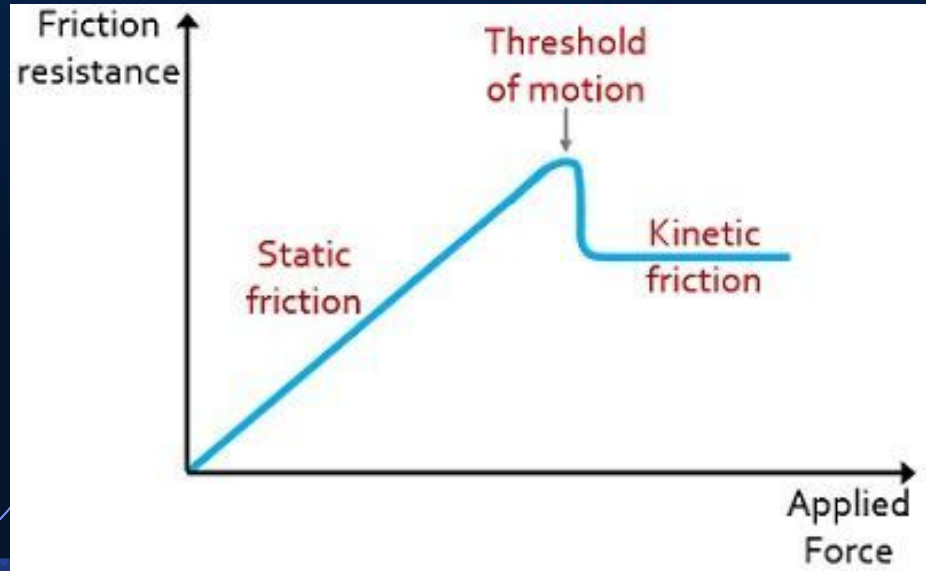

☆ Friction is a force that opposes the direction of motion

Kinetic Friction:

$$f_k = \mu_k N$$

Static Friction:

$$f_s \leq \mu_s N$$

2.

Problem Solving

Some Steps to Follow If You're Lost

Kinematics

How to Identify:

- Projectile Motion
- Given $x/v/a$
- Relative Motion

Kinematics

- ▷ List given variables
 - ▶ In both x and y directions
- ▷ Match up to kinematics equations on equation sheet
- ▷ Remember to watch out for Relative Motion

Forces

How to Identify:

- Springs
- Mass Sliding
- Ramps
- Strings

Forces

- ▷ ALWAYS start with Free Body Diagrams
- ▷ Write **F=ma** equations
 - ▶ In both x and y directions
 - ▶ Pay close attention to the SIGNS of your variables!
- ▷ Solve for the unknown variable(s) in the problem
